LIPPING UNIT HEIGHT ADJUSTMENT

Step 1

Turn the 4 set screws clockwise until they all touch the Lipping Unit bracket.

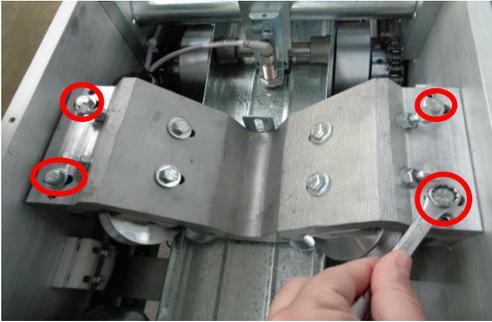

Step 2

Using a 13mm spanner loosen the 4 M8 bolts +/- 5 turns anti-clockwise

Step 3

Now turn the set screw clockwise 1 full turn and a gap will be created between the lipping unit and bracket.

Step 4

Tighten the 4 M8 bolts. Run a piece of the profile out and check it. Further adjustment may be required.
